Trunnion Ball Valve

INTRODUCTION

The Optimux **OpTB** Trunnion Ball Valve brings the legendary and well proven robustness and dependability of the trunnion ball design to process control applications, no longer limited to a full port option, but now being offered with our new **Process Optimizer Ball POB™** which delivers excellent flow characteristics and high flow coefficients (**Fig. 1**).

Our new **OpTB** with its efficient **POB™** design, delivers excellent rangeability and accurate control for pressure Classes 150 to 1500 while maintaining critical features such as fire-safe and metal-to-metal tight shutoff. The **OpTB** raises the bar to new levels not yet reached by traditional V-Notch ball valve manufacturers, typically limited to 600 pressure class.

The **OpTB** has been designed with flexibility in mind, the full bore ball (**Fig. 2**) is totally compatible and interchangeable with the new **POB™** (**Fig. 2**) within the same size and class valve, and with no additional valve components or special tooling required.

All these features make the **OpTB** an exceptional process control valve ideally suited for industrial services which require solutions for challenging abrasive, corrosive fluids, high temperatures and pressures.

Figure 1
OpTB POB™ Process Optimizer Ball

Figure 2
Full Bore & POB™ Balls

When the POB™ is used please refer to the flow coefficient Cv information shown in **Table 1** for proper selection

OpTB™

Trunnion Ball Valve

OS2T™ Optimizer Severe Service Trim

Our **OpTB** is also well equipped to withstand and manage the undesired effects of noise and cavitation in liquid fluids.

The **OS2T™** trim (**Fig. 3**), has been designed to reduce up to 25 dB of noise, as well as to eliminate the destructive effects of cavitation.

The unique design of the **OS2T™** drives the process fluid through a tortuous path consisting of a series of orifices and back channels which remove kinetic energy and lower fluid pressure,

There are several application-specific **OS2T™** trims available to handle any given fluid dynamics condition. Our application engineers will carefully evaluate your process data as to be able to choose the optimal solution.

The **OS2T™** trims have been designed to work inside the core of the **Control Optimizer Ball COP™** itself, so that the fluid characterization, as well as the noise, and cavitation abatement occurs simultaneously within the core of the ball, and not delayed upstream or downstream, where these undesired effects can damage the valve internal components.

Noise or cavitation baffles inserted upstream or downstream of valve bodies or on pipelines have been used extensively in the past, however they have proven to be less effective, especially when handling flow conditions exhibiting high noise, and cavitation.

Figure 3
OpTB OS2T™
Optimizer Severe Service Trim

Typical industry applications include compressor surge control taking advantage of the high rangeability and capacity of the **OpTB™**. High pressures and temperatures associated with steam production from geothermal wells mixed with sand are comfortably controlled with the **POB™** specially when hardened with **CVD-5B™**. Feed gas regulation applications such as gas-to-flare are ideally suited for the **OpTB™** because of its exceptional tight shutoff characteristics.

In general, the **OpTB™** will be one of the best choices for challenging process control applications such as multiphase fluids and light to medium slurries like those found in oil sands, mining and pulp and paper fluids.

OpTB™

Features and Advantages

- ***Rugged well proven three-piece trunnion design***
- ***Conforms to API 6D Standard***
- ***Fire-Safe tested to API 607***
- ***Lower operating torques for smooth operation while reducing actuator cost***
- ***Ball mechanical tolerances 0.0009” and 4 RMS mirror finish***
- ***Meets NACE MR01.75 Standards for sour applications***
- ***POB™ alternative offers precise flow characterization for accurate control, pressure class 150 to 1500***
- ***The POB™ design allows the control of fluids with a rangeability superior to 300:1***
- ***Our standard Full Bore Ball and the POB™ are fully interchangeable within same size and class body without any additional components***
- ***Spring loaded seat rings for positive sealing***
- ***Designed for a broad spectrum of on-off, or control application in the Oil & Gas, Chemical, Petrochemical, Geo-Thermal Power Generation, and a large variety of industrial slurries under high pressures and temperatures.***
- ***Noise abatement and anti-cavitation severe service OS2T™ trims available***

OpTB™

Rotary Actuators, Features and Characteristics

Optimux can fit its OpTB with the best performing actuators such as scotch yoke, electric, and electro-hydraulic according to the process application requirements and customer preference.

RPA Rack and Pinion Actuators

Optimux's Series RPA actuators are compact, allow for field reversibility, provide adequate torque for most standard applications and are easy to maintain. RPA actuators are designed for extremely long cycle life when utilized in normal loading applications. The RPA actuators will take service temperatures of -10° to 275° F (-23° to 135° C).

Double Acting Torque Values (in. Lbs)					
PSI	40	60	80	100	120
RPA052	263	395	526	658	789
RPA148	740	1,109	1,479	1,849	2,219

Table 10

* Other model numbers and torque options are also available

Optimux HPP3000 Smart Valve Positioners

The HPP3000 is a high performance microprocessor-based, current-to-pneumatic HART® positioner which also has available options such as Foundation™ Fieldbus, DE, and standard 4-20mA.

This smart positioner incorporates state-of-the-art features such as: Automatic configuration, split range options, 16 points of characterization, self-diagnostics, etc, all contributing to increase productivity and efficiency in industrial plants.

The HPP3000 is FM/CENELEC/NEPSI/CSA certified for explosion proof and intrinsically safe requirements. For more information please refer to Optimux HPP3000 technical bulletin: TB-HPP3000-07-04.

Optimux HPP3500 Smart Valve Positioners

The HPP3500 delivers all the same technical benefits and characteristics as of our HPP3000, however the HPP3500 was specially designed to conform the needs of most rotary actuated valves, such as smaller footprint requirements and specific mounting options such a NAMUR. The HPP3500 is intrinsically safe and is certified by FM/CENELEC/ATEX. For more information please refer to Optimux HPP3500 technical bulletin: TB-HPP3500-07-04.

The HPP3000 and HPP3500 in combination with our rotary actuators: deliver the highest level of control accuracy and responsiveness of the industry.
