OPTIMUX[®] VB Series

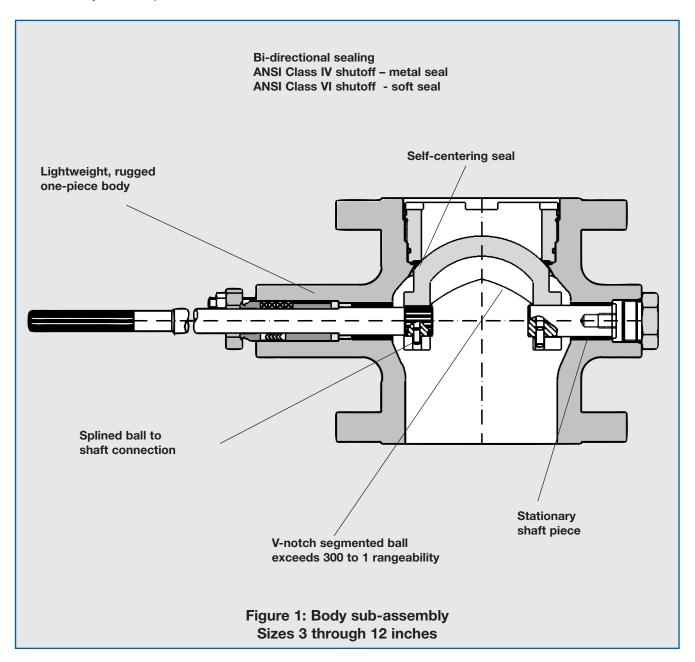

OpVEE v-Notch Control Valve

Control Valve

The adjective "rugged" describes the OpVEE ball valve. Designed to overcome the problems of hard-handling and particle entrained processes, OpVEE achieves a precise and trusty control in a wide range of applications such as chemical, pulp and paper, energy and oil industries etc. OpVEE addresses and solves many long-standing challenges faced by traditional ball valves, such as:

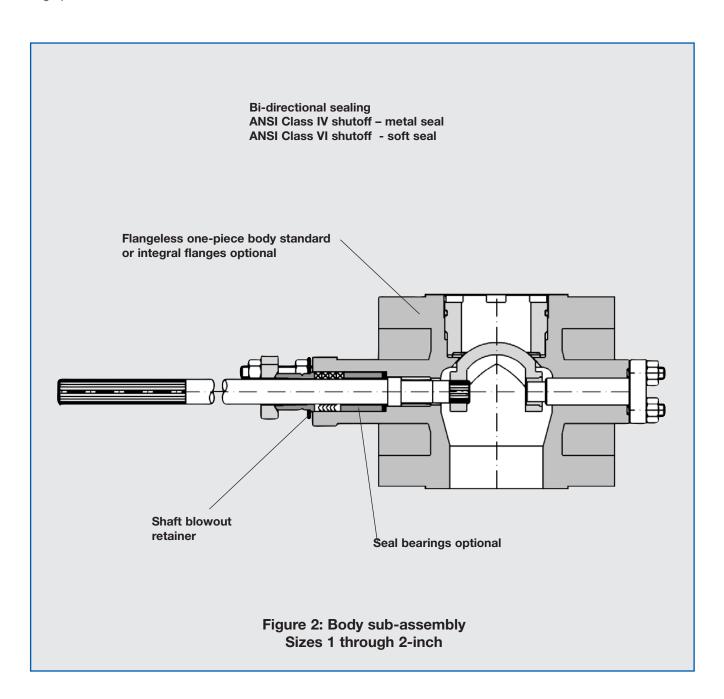

- Piping forces that unevenly load the seat
- Low rangeability due to limited orifice characterization
- Unsatisfactory shutoff capabilities.

Control Valve

OpVEE achieves ANSI Class IV shutoff with a metal seal and ANSI Class VI when soft seal is used. Although of its standard flangeless body design, OpVEE can be equipped under request with separable end flanges or integral flanges in sizes 1 through 16-inch ANSI Classes 150, 300 and 600, in stainless steel, carbon steel or other alloys. The following page list many important features and options which OpVEE uses to fulfill these and other requirements for ruggedness and high-performance.

Seal Rings

Soft Seal Rings

The soft seal ring standard design for the OpVEE utilizes a 316 stainless steel Inconel ring in conjunction with PEEK or Teflon. This design provides for a quick and easy soft seal replacement in case of failure allowing for an easy removal or cutting operations. In some applications such as those for alloy bodies, back-up rings cannot be used due to occasional harsh problems on the ball, specially if it is surface-plated or hardened. In those cases a soft seal ring design can be used instead where metal back-up ring is not permitted such as for alloy bodies. This sealing design also permits a bi-directional flow as well as applications such as oxygen or corrosive media where 316 stainless steel or 625 Inconel is not compatible with the process flow media or ball material.

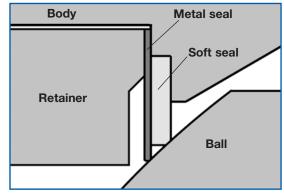

Figure 3: Dual Ring

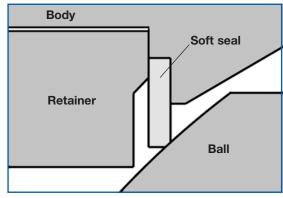

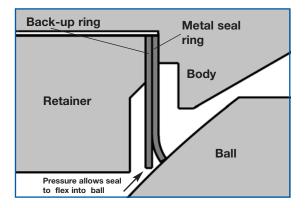

Figure 4: Soft Seal

Bi-directional Seal Rings

The metal seal design for the OpVEE utilizes the pressure drop across the ring to energize the seal to bubble-tight shutoff in either flow direction. As pressure enters the cavity with the shaft downstream, the flexible seal deflects into the ball, causing it to seal tighter against the ball. As pressure enters the cavity with the shaft upstream, the back-up ring locks the seal ring against the ball, causing it to increase sealing between the ring and the ball itself.

The ANSI Class IV shutoff can be achieved by utilizing a metal seal and ANSI Class VI shutoff by utilizing a soft seal. As pressure drop increases, OpVEE uses that pressure to achieve a tighter shutoff.

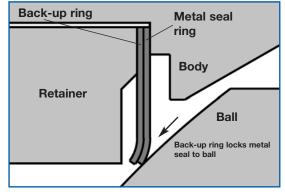

Figure 5: Bi-Directional Seal Rings

Features and Advantages

OpVEE utilizes several characteristics for ruggedness and high performance

One piece body

- High performance ensured regardless for flange torque loads
- Seat tightness not altered by piping forces, as in two-piece bodies
- · One leak path eliminated

Segmented V-notch ball

- · Clogging reduced
- "V" shaped orifice exceeds 300 to 1 rangeability
- Shearing action in fibrous fluid mediums is excellent

Bi-directional assisted type shutoff seal

- · Metal seal provides greater than ANSI Class IV shutoff
- · Soft seal achieves tight ANSI Class VI shutoff

Self-centering seal

- · Seal installation improved and simplified
- Shutoff further improved

No-shim seal

· Servicing and installation problems reduced

Thick-walled retainer

Valve's normal service life extended in erosive environments

Flangeless design standard

Reduced cost

Separable flange option

- · Bolt length reduced, avoiding leakage in event of fire
- · Flange bolting aligns easier
- · Alloys costs reduced

Integral flange option

• Bolt length reduced, avoiding leakage in event of fire

Interchangeability

- Standard face-to-face dimensions allow for easy field upgrading from other manufacturer's product lines
- Actuator interchangeable with OpDX and OpEXC valves' actuators

Seal replaceable without removing ball and shaft

Maintenance is fast and easy

Shaft serviceable from outboard end of valve

- The need for actuator removal to replace ball and shaft is eliminated
- · Shaft protected from blowout

Full, uninterrupted gasket surface

- · Gasket alignment problems reduced
- Wider range of gasketing possible, including spiralwound

Piston cylinder actuator

- · High-thrust for a high performance throttling
- Actuator fully interchangeable with OpDx and OpExc rotary valves actuators
- Most parts of other Optimux products compatible with OpVEE parts
- Actuator air pressures allowable up to 150 psi (10.3 Bars)

Splined shaft

• Extra strength provided with no lost motion or dead band

Available in variety of materials

 Materials include carbon steel, 316 stainless steel and other alloys

Each OpVEE feature contributes to a product measurably superior to other Vee Ball valves, as illustrated by the following pages which contain additional information and specifications.

OpTK

Actuator

RA Piston Cylinder Actuators

Optimux's Series RA Piston-Cylinder-Rotary-Actuators are an excellent actuation choice to obtain maximum performance of our **OpVEE** eccentric plug control valves. The Optimux Series RA piston cylinder rotary actuators with fail-safe spring combine high torques with pneumatic stiffness which together deliver excellent throttling characteristics. The Series RA compared to regular spring-diaphragm actuators, are lightweight, compact, efficient and in general, they take a smaller foot-print for installation in pipelines, they are simply, one of the best choices in actuation systems for rotary control valves.

The Series RA piston cylinder actuators are offered as our standard offer for all of our Rotary valves: Series DX, and Series XL.

The Optimux Series RA piston cylinder actuator was designed to work with supply pressures of up to 150 psi (10.3 bars), which significantly increases torque capacity. The Series RA performance and reliability in the field has no par, as it has proven life service above one million cycles.

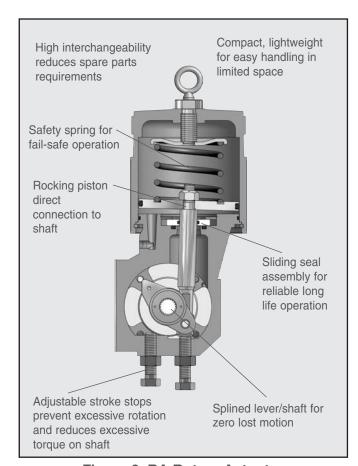

Figure 6: RA Rotary Actuator

The pneumatic stiffness achieved by the Series RA assures excellent throttling and control characteristics specially in near closing control positions.

Table I: Rotary Actuator Specifications

Туре	Double-acting piston and cylinder with fail-safe spring
Sizes	25, 50
Action	Air-to-open Air-to-close Last position Field reversible
Operating Pressure	Max 150 psig Max 10,3 bars
Stroking Speed	≤ 1 second
*Temperature Range	-40° to 350°F (-40° to 175° C)
Auxiliary Handwheels	Declutchable side-mounted handwheel Lever-gear operated handwheel Lever operator
Positioners	Digital HPP-3000 Digital HPP-3500

Table II: Construction Materials

Yoke	Ductile iron
Transfer Case	Anodized aluminum
Splined Lever Arm	Nickel-plated ductile iron
Stem	UNS S 41600 Stainless Steel
Bearings	Filament wound fiberglass with Teflon liner
Sliding Seal	Delrin, aluminum
Retaining Ring	Cadmium plated steel
Piston	Anodized Aluminum
Cylinder	Anodized Aluminum
O-Ring*	Buna-N (standard)
Actuator spring	Coated steel (rust proof)
Spring button	Cadmium-plated steel

^{*} Ambient temperatures greater than 180° F (82° C) require Viton O-rings. Ambient temperatures below -40° F (-40°C) require fluorosilicone O-rings.

OpTK

Rotary Actuators, Features and Characteristics

RPA Rack and Pinion Actuators

Optimux's Series RPA represent an excellent alternative to our RA Piston-Cylinder Series for rotary valves applications. As with the RA Series the RPA actuators are compact, allow for field reversibility, provide adequate torque for most standard applications and are easy to maintain. RPA actuators are designed for extremely long cycle life when utilized in normal loading applications. The RPA actuators will take service temperatures of -10° to 275° F (-23° to 135° C).

The Series RPA actuators are also offered for all our rotary valves: Series DX and Series XL.

Table III: Double Acting Torque Values (In. Lbs)

PSI	40	60	80	100	120
RPA052	263	395	526	658	789

Optimux HPP3000 Smart Valve Positioners

The HPP3000 is a high performance microprocessor-based, current-to-pneumatic HART® positioner which also has available options such as Foundation $^{\text{TM}}$ Fieldbus, DE, and standard 4-20mA.

This smart positioner incorporates state-of-the-art features such as: Automatic configuration, split range options, 16 points of characterization, self-diagnostics, etc, all contributing to increase productivity and efficiency in industrial plants.

The HPP3000 is FM/CENELEC/NEPSI/CSA certified for explosion proof and intrinsically safe requirements. For more information please refer to Optimux HPP3000 technical bulletin: *TB-HPP3000-07-04*.

Optimux HPP3500 Smart Valve Positioners

The HPP3500 delivers all the same technical benefits and characteristics as of our HPP3000, however the HPP3500 was specially designed to conform the needs of most rotary actuated valves, such as smaller footprint requirements and specific mounting options such a NAMUR. The HPP3500 is intrinsically safe and is certified by FM/CENELEC/ATEX. For more information please refer to Optimux HPP3500 technical bulletin: *TB-HPP3500-07-04*.

The HPP3000 and HPP3500 in combination with our rotary actuators: RA and RPA, deliver the highest level of control accuracy and responsiveness of the industry.

Packings

The **OpVEE** rotary valve is built with a large packing box which gives a longer service life to the packing assembly. The **OpVEE** Packing box design allows for the use of a large number of packing system options, and fully complies with the most demanding fugitive emission control regulations in modern industrial processes.

Standard Packing

The **OpVEE** standard packing set is composed by PTFE "V" rings, Figures 10A and 10B. The PTFE "V" rings are the most used packing system since their introduction, providing exceptional tight sealing. They provide a very low friction coefficient, good mechanical resistance and excellent resistance to corrosion. The PTFE "V" rings are the most common application choice for gasketing material.

The PTFE "V" rings are used within temperature ranges of 150° to 450°F (-101 to 232° C). High Temperature Packing The **OpVEE** formed packing rings, Figures 11A and 11B, is an alternative choice whenever the operating temperature exceeds that determined for the use of PTFE "V" rings. The materials employed in the formed packing rings of the **OpVEE** are braided PTFE for use in temperatures up to 500°F (260°C) and Grafoil for use in temperatures up to 752°F (400°C). The Grafoil formed packing rings are an excellent choice whenever packing is subjected to high operating temperatures, however it should be noted that the demand of high forces required to achieve a tight sealing results in a significant friction increase forces as the valve plug turns.

Special Packing

The PT type packing set, Figure 12A, is composed by a set of "V" type rings under compression by an assembly of disc springs that result in a "live-loading" effect. This system achieves a sealing level of below 500 ppm. The PT type packing combines the superior virgin PTFE "V" rings quality with the PTFE "V" rings combined with carbon filament wound. The PTG type packing, Fig. 12B, is composed of an advanced packing set that is capable of keeping a sealing rate very below 500 ppm (at a 10 ppm step rate). The PTG packing set is composed by the combination of PTFE "V" rings with carbon filament wound and Kalrez® "V" rings, an advanced material that provides a superior performance to the packing set. For temperatures higher than 450°F (232° C) the PTG XT packing set is employed. This type of packing utilizes Zymax® rings instead the PTFE/carbon rings.

⁽¹⁾ Select bearings material

Table XI: Material Selection

Part	Material
Body	Carbon steel; 316, 316L, 304, 304L, Monel, Hastelloy C, Hastelloy B/B-2, Titanium
Ball	317, 316, 316L, 304, 304L stainless steel, Hard chrome plating, stellite, Hastelloy C, Hastelloy B/B-2, Monel, Alloy 20, Titanium
Shaft / pins	17-4 pH, Nitronic 50, Nitronic 50/Stellite, Hastelloy C, Hastelloy B/B-2, K-Monel, Alloy 20, Titanium
Bearings	MBT, Stellite, Ultimet.
Metal seal	316 stainless steel, Inconel
Soft seal	Glass-filled Teflon, PEEK, TEFZEL.
Packing	TFE V-rings, AFPI, Glass-filled Teflon/TFE, Grafoil, PTG, PT, PTXT
Back-up ring	316, 316L, 304, 304L stainless steel, hard-chrome plating, Stellited 316 stainless steel, stellited
	316L stainless steel, Monel, Hastelloy C, Hastelloy B/B-2, Alloy 20, Titanium
Bearings seal	Viton, Graphite "O"-rings.
Yoke bolting	Carbon steel, stainless steel

⁽²⁾ Check for medium compatibility with bearings material

⁽³⁾ Ultimet bearings with shafts in Monel are not recommended for non-lubricating medium operations

Specifications

Table XII: Estimated Weight for Shipping

(With Standard actuator and positioner)
